JAPANESE HEALTHCARE COMPANIES
~ Product Catalogue ~

JETRO, or the **Japan External Trade Organization**, is a government-related organization that works to promote mutual trade and investment between Japan and the rest of the world. Originally established in 1958 to promote Japanese exports abroad, JETRO's core focus in the 21st century has shifted toward promoting foreign direct investment into Japan and helping small to medium size Japanese firms maximize their global export potential.

As of April 2022, JETRO has a total of 48 regional offices in Japan and 76 overseas offices in 55 countries.

If you'd like to connect to one of the Japanese healthcare companies featured in this catalogue, join us at the

❖ Product: Neonatal bilirubin meter, colorimeter

- ❑ **Address:** 951, Angyouyou Negishi, Kawaguchi, Saitama, 333-0834, Japan
- ❑ **Year of Establishment:** 1976 **Business Type:** Manufacturing
- ❑ **URL:** <http://www.apel.co.jp/>

Company Overview:

Since 1976, APEL CO., LTD. has developed, designed and manufactured, mainly optical analytical instruments, including medical devices such as neonatal Bilirubin meter, Hemoglobin meter and analytical instruments such as photoelectric colorimeter, spectrophotometer, etc.

We have supplied our products not only in Japan but also worldwide more than 70 countries. Those our products have been used in all fields of analysis of liquid concentration, such as department of obstetrics and gynaecology, paediatrics, blood centre, laboratories, school, food and beverage manufacturers and water quality test site etc.

Products/Services Overview:

Bilirubin meter BR-502

Bilirubin meter for neonatal jaundice screening

- Easy to operate thanks to advanced electronic circuits like our proprietary auto-zero system.
- Careful selection of the dual wavelength color filters and the combination of electronic technology minimize the interference of hemolysis and turbidity. Particularly suitable for jaundice examinations of neonates.
- A serum gauge provided on the surface, which indicates the proper sample volume to be inspected. Only simple action is required to set the capillary tube into the holder.
- Alarm lamp signals hemolysis of 250mg/dl or more.
- BR-502 does not need a lamp replacement thanks to the LED light source.

Colorimeter AP-120

- Five filter are built in.
- T=0% and T=100% are automatically set with just a touch of key.
- Thanks to an LED, lamp replacement is unnecessary.
- AP-120's foot print is small and weights only 0.8kg.
- Minimum sample volume is 1.0ml.

Bilirubin meter BR-5200

Bilirubin meter for neonatal jaundice screening

- Max. one second measurement time.
- A sample gauge provided on the surface, which indicates the proper sample volume to be inspected. Only simple action is required to set the capillary tube into the holder.
- Once BR-5200 is calibrated, no more daily calibration is required.
- The dual wavelength measuring method eliminates interference of hemolysis and turbidity.
- BR-5200 has an RS-232C and a USB interface for connection with computer.
- BR-5200 does not need a lamp replacement thanks to the LED light source.
- BR-5200's foot print is small and the weight is only 0.9 kg.

Bilirubin meter BR-5200P

Bilirubin meter for neonatal jaundice screening

- Max. one second measurement time.
- A sample gauge provided on the surface, which indicates the proper sample volume to be inspected. Only simple action is required to set the capillary tube into the holder.
- Once BR-5200 is calibrated, no more daily calibration is required.
- The dual wavelength measuring method eliminates interference of hemolysis and turbidity.
- BR-5200P has a USB interface for connection with computer.
- Compact thermal printer is built in.
- BR-5200P does not need a lamp replacement thanks to the LED light source.

❖ **Product: Pre-owned Medical Equipment. (MRI, CT, Cath Lab., Mammography, Bone Densitometer, C-Arm, X-Ray, Pet CT, etc.).**

- ❑ **Address:** 6th Floor AICA Bldg. 1-13-27 Minami-Semba, Chuo-ku, Osaka, 542-0081, Japan
 - ❑ **Year of Establishment:** 1978
 - ❑ **URL:** <https://www.cycorp.co.jp/medical/>
- Business Type:** Wholesaler/Retailer

Company Overview:

Established in 1978 under the Joint-Venture with Multi-National Group of Companies with Headquarters in Geneva, Switzerland.

We have 4 divisions in charge of:

- (1)"Bakture" Powder for Agriculture and Water Purifications
- (2)"Aquablaster" Aeration Diffusers for Wastewater Treatment
- (3)Pre-owned Medical Equipment of MRI, CT, Cath Lab, etc.
- (4)Parking Systems, fully Automatic, Elevator Slide Type, Mechanized, Multi-Levels.

Products/Services Overview:

Pre-owned Medical Equipment. (MRI, CT, Cath Lab., Mammography, Bone Densitometer, C-Arm, X-Ray, Pet CT, Endoscope, Blood Cell etc.).
Please contact us because the specifications are different one by one.

❖ Product: **Compact mechanical PCA pump**

- ❑ **Address:** 2-6-2, Ayumino, Izumi-City, Osaka, 594-1157, Japan
- ❑ **Year of Establishment:** 1968 **Business Type:** Manufacturing
- ❑ **URL:** <https://daiken-iki.co.jp/en/>
- ❑ **Product URL:** <https://daiken-iki.co.jp/en/pi/>

Company Overview:

DAIKEN MEDICAL is a development-oriented medical device manufacturer whose vision is to "create a drastic medical revolution with unique technology. We have developed original products such as the "QinPot" and "FitFix" disposable suction devices, which have been highly reputed in the Japanese market. We have also successfully developed and manufactured an ultra-compact micropump and developed our newest product, the "AmyPCA", a small mechanical PCA pump controlled by a smart phone that is compact and highly user-friendly.

The "AmyPCA" is a compact mechanical PCA pump, mainly used for postoperative pain relief. It was developed based on a completely different concept from conventional products that use a micropump as a drive source, and the micropump itself, the driving source, is disposable to prevent drive problems. In addition to being compact, the pump can be controlled with a smartphone for easy and intuitive operation. The "QinPot" is a disposable suction device that is mainly used in ICU, CCU, and NICU for phlegm suction applications. With a user-friendly design and various improvements that meet the on-site needs, the QinPot is simple yet easy to use. This product can contribute to infection control and improve operational efficiency in hospitals.

Products/Services Overview:

Delivering Safe and Accurate
Postoperative Pain Management

❖ Product: Dental laboratory equipment & material and furnace for scientific instruments & equipment

- ❑ **Address:** 24-3, Kisshoin Ishiharakyomichi-cho, Minami-ku, Kyoto 601-8356, Japan
- ❑ **Year of Establishment:** 1871
- ❑ **URL:** <https://denken-highdental.co.jp/en/>
- Business Type:** Manufacturing

Company Overview:

Denken-Highdental Co., Ltd. is one of largest manufacturer of dental laboratory equipment and material and furnace for scientific instruments and equipment for some health industry in Japan. Our technology and products have been highly evaluated and established trust with customers in United States, Europe and Asia as well as Japan. On the base of the customer's trust, Denken-Highdental Co., Ltd. aim for company with social value which contributes to the world.

Products/Services Overview:

Zirconia Sintering Furnace

- *The unit has capability to sinter 75 units simultaneously by three stackable trays.
- * Normal and Quick firing
- *The unit can be processed in various ways including both a normal firing and a quick firing.

<https://youtu.be/9TCZ1-tlZFQ>

Cascom SE –

- * Excellent castability
- This new induction heating unit enables to translating to porosity-free dense casting, because melting alloy is not by gas flame and never absorbs any gas.

<https://youtu.be/OEdj-6b0HV4>

- NEO SUPER CASCAM** - features a specialized spiral ceramic heater element which precisely melts the alloy at desired temperatures. Such precision heating eliminates overheating of the alloy and therefore minimizes porosity.

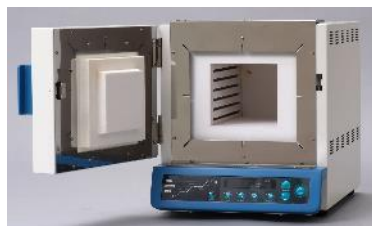

<https://youtu.be/RZzKSpfszX8>

Oral Care Aspirator Sweetie

<https://youtu.be/xFBrsRQq8S0>

- BURN OUT FURNACE 008Plus** 007Plus and 008Plus can store multi-firing program up to 10 courses for every investment need. Their units feature a quick firing button that allows you to change the normal firing program to the quick version for quick heat investment.

- Porcelain Furnace** *Excellent porcelain results can be created by KDF heat technology and know-how and also can be compatible with the compact body size.
- *Precise even muffle heat distribution will not busy any warping in baking degassing process.- Our medical sterilizer manufactured in Japan.

DESKTOP GAS CONVERTIBLE VACUUM FURNACE KDF-75Plus

- * Vacuum and gas atmosphere heat treatment Supports a wide range of heat treatments, from vacuum (order of 13.3 Pa) to gas atmosphere (atmosphere, oxygen, nitrogen, argon, etc.) and gas flow
- * Fully automatic program operation The temperature, time, vacuum, gas flow, and atmospheric release are all programmed, and the fully automatic program operation saves labor in heat treatment work. Can be standardized

DESKTOP BURN OUT FURNACE KDF-HT1000

- *Tabletop high-temperature electric furnace ideal for research and development of ceramics and new materials
- * A maximum of 100 segments is possible by concatenating the program capacity of 10 patterns each of 10 segments.

❖ Product: **food freshness retention technology equipment**

- ❑ **Address:** 18-2-709 Tyuomachi Kurumeshi Fukuoka, Japan
 - ❑ **Year of Establishment:** 1871
 - ❑ **URL:** <https://www.ensembelle.com/>
- Business Type:** Wholesaler/Retailer

Company Overview:

Working with an American business partner with 40 years of trade experience and extensive contacts, we are passionate about promoting excellent Japanese products and foods to the world. Our goal is to provide products that combine Japanese tradition and innovation to meet the needs of our customers. We hope to be a bridge between Japan and the world by sharing the appeal of Japanese products with the rest of the world.

Products/Services Overview:

DENBA technology is a next-generation freshness retention technology that activates the water molecules in foodstuffs to maintain their seasonal flavor. DENBA technology is a next-generation technology that activates the water molecules in foodstuffs to keep them fresh and tasty in season. Grapes and Shine Muscat, which are high-end fruits, remain fresh and tasty even after 2 months. Processors who wholesale meat to supermarkets use DENBA when defrosting meat and fish, and this has resulted in up to 95% reduction of drips. The system can also be used for cell-free freezing in general freezers, and has begun to be installed in household refrigerators, commercial refrigerators, transportation trucks, containers, and various other hardware throughout the world.

Recently, the unstable climate due to global warming, disasters caused by typhoons and heavy rain, and the unreadable and drastic decrease in the number of customers due to a new type of coronavirus have made people involved in the food industry extremely worried.

In addition, in view of the movements around the world, the SDGs (Sustainable Development Goals) have been set as a common goal for the international community, and companies are now required to work toward this goal.

DENBA is working daily to resolve issues related to food distribution, from producers to retailers and those involved in the restaurant industry, such as "increasing product value through shipment adjustments," "stabilizing unit sales prices by adjusting market oversupply," "expanding sales channels," "maintaining product unit prices by extending the fresh period," and "reducing food loss. We are working on a daily basis to solve these issues.

DENBA FRESH PRO

<https://youtu.be/u1ug8UPNypI>

DENBA FRESH

https://youtu.be/KE3gMQMGB_4

DENBA FRYER

Molecules to reduce the oxidation of oil.

It also lowers the FRYER temperature by 5 to 10 degrees Celsius, enabling low-temperature cooking.

Low-temperature cooking reduces oil oxidation, reduces the load on the oil, and lengthens the oil change cycle.

It lowers the temperature of the cooking area and improves the cooking environment by reducing oil splashes and smoke during cooking.

DENBA FRYER reduces the burden of cleaning and other labor, saves on air conditioning usage, and improves the environment of restaurants and stores. It reduces frying time by 10% to 15%. Reduces oil absorption and brings out the natural flavor of ingredients.

Quickly cooks in a short time, reduces oil absorption in food, and cuts fat content in fried food by up to 40%. The flavor of the ingredients is preserved. Successfully reduces carcinogens by 75%.

❖ Product: **Gaze Analyzing Perimeter GAP HMD**

- ❑ **Address:** Tokyo Sankei Bldg 26F, 1-7-2 Otemachi Chiyoda-ku, Tokyo, 100-0004 Japan
- ❑ **Year of Establishment:** 1985 **Business Type:** Manufacturing
- ❑ **URL:** <https://findex.co.jp/en/index.html>
- ❑ **FB:** <https://www.facebook.com/findex.jp>

Company Overview:

Our company is expanding its business in three key areas: medical, public, and health tech. Medical business makes up 90% of our sales, offering integrated systems for various medical institutions. Public business provides document systems and RPA tools to administrative departments. In health tech, we sell a head-mounted line-of-sight analysis perimeter with AI-based judgment logic, facilitating glaucoma detection. We're also involved in collecting and analysing medical and healthcare data using AI for various purposes, including early disease detection and drug discovery.

Products/Services Overview:

Gaze Analyzing Perimeter GAP HMD

Gaze Analyzing Perimeter ,GAP, is a head mounted automatic perimeter designed and developed internally. It conforms to MDR and has obtained manufacturing and sales approval from the PMDA. It is anticipated that this medical device will contribute to the early detection of glaucoma, one of the leading causes of blindness.

The features of this product are as follows:

1. GAP utilizes eye-tracking technology and is equipped with AI-driven logic. It introduces a new measurement method called "gaze analysis" which allows for examination simply by following the stimulus with the eyes.
 2. GAP reduces the time required for recognition and operation by eliminating the need for long-term gaze fixation and button operation, leading to shorter measurement times.
- Additionally, since it's a head mounted device, patients can comfortably undergo visual field tests whether they're in a bed, wheelchair, couches, and sofas.
3. GAP is a near-objective test method analyzing eye movement tracking in a reflective manner. This reduces the risk of false positives, such as "I feel like I saw a target and pressed a button."
 4. GAP requires only a PC and goggles to perform the test. Not only does it save a lot of space compared to conventional perimeters, but with its high portability, it can also be used anywhere since a dark room environment is not necessary.
 5. GAP is designed for a wide age range and weighs only 400g. It also uses components optimized for visual field testing, allowing measurements with sensitivity equivalent to conventional visual field-testing devices.

Specification

Threshold test (Sensitivity measurement):30-2,24-2,10,2

Dark-spot detection test (Screening):30-2,24-2,10,2

Size of visual indicator:Goldman II-V

Maximum brightness :3,000cd/m²

Eligible Age of measurement:Age 13 and over

Details of corrective lenses:SPH plus or minus 0.5-10.0D, CYL plus or minus 2.0-6.0D

❖ Product: **Medical Safety Box**

- ❑ **Address:** 2002-19 Koji, Konan-cho, Koka City, Shiga 520-3306, Japan
 - ❑ **Year of Establishment:** 2008
 - ❑ **URL:** <https://fine-pro.jp/en/>
- Business Type:** Wholesaler/Retailer

Company Overview:

Finepro is a manufacturer of plastic consumables for the medical and physical science fields. Products are manufactured at our own factories in Japan and Thailand. Our signature product, the needle disposal box, embodies our commitment to user needs and quality. We currently offer nine different models in Japan and Southeast Asia, each designed to meet the specific requirements of hospitals and diabetic patients. We have manufacturing facilities in Japan and Thailand to ensure our products meet the highest quality and safety standards. The Thai facility is registered with the US FDA and also sells in the US. Furthermore, we have obtained ISO9001 and ISO13485 certification to ensure the reliability of all our products. Finepro is actively expanding its product portfolio to meet the ever-evolving needs of its users.

Products/Services Overview:

Fine Pro's Sharps Containers – Medical Safety Box

- 0.2L: Portable type. For use at home or while traveling. Disposal of insulin pen-needle and lancet
- 1.0L: Disposal of insulin syringes and other syringes at Home
- 1.5L/3.2L: Suitable for clinic and hospital. Useful handle equipped
- 5.0L: Thick wall design meets the needs of disposal container in the operation room
- 7.6L: Suitable for the hospital. Useful handle equipped and variety of hanging accessories to use with the medical cart

Two different openings for specific applications. One is hinge type and another is rotating mailbox type. The sharps container with the hinge-type opening is equipped with a needle removal port. The pen needle removal port has been jointly developed and patented with a pen needle manufacturer. This port is a one-of-a-kind design that makes it easier for users to operate and allows the needle to be safely disposed of. The needles can be removed from the insulin pen without being touched, so there is no need to hold the needle area before removing it. Therefore, it can be easily used even by elderly people who have poor eyesight and unstable fingertip control.

In addition, The Fine Pro's Sharps Containers have a very robust structure. Even hospitals, who provide services collecting filled sharps containers from users, can collect them with no fear of needle stick injury. Equipped with both temporary lock and permanent lock function which are not only easy to use but also with visually recognizable design.

❖ Product: **Wrist blood pressure monitor**

- ❑ **Address:** 3F HDG Bldg., 4-5-4, Minami 16-Jo Nishi, Chuo-Ku, Sapporo-Shi, Hokkaido
 - ❑ **Year of Establishment:** 2015
 - ❑ **URL:** <https://www.hdgroup.jp/en/>
- Business Type:** Other

Company Overview:

We are Hokkaido Development Group, a company driven by our passion for "HOKKAIDO LOVE," dedicated to promoting the charm of Hokkaido to the world and enriching the region. As a global trading company rooted in Hokkaido, we work with various local manufacturers to expand their sales strategies. We handle a wide range of categories, including food, supplements, pharmaceuticals, cosmetics, baby products, and more, and export them to China, East Asia, Southeast Asia, and some parts of Canada.

Our goal is to showcase the allure of Hokkaido to the world and contribute to its prosperity. As part of our business activities, we have become the exclusive distributor for renowned Hokkaido confectionery "Shiroyo Koibito" and have successfully managed its sales both online and offline in China.

We take pride in being a Hokkaido-based global trading partner, and we are committed to promoting the excellence of Hokkaido's products and culture beyond borders.

Products/Services Overview:

収納ケース付き

Taiyo Ship Wrist blood pressure monitor

This wrist-type blood pressure monitor is easy to measure every day and is very convenient to carry!

It's a wrist type, so it's easy to measure! Comes with a storage case, so it's convenient to carry when going out or traveling!

*Irregular pulse can be detected

* Comes with a body movement mark function, so it will let you know if your wrist or body moves and the measurement cannot be done correctly.

*With 6-level blood pressure display function

*If you set the date and time, you can display the date and time.

Oxidol 500

Used to disinfect and clean wounds. Oxygen bubbles lift sand and mud that has gotten into the wound.

It is effective to use Acrinol after Oxidol.

❖ Product: **manufactures medical, health and beauty equipment**

- ❑ **Address:** 17-2 Shinsen-cho Shibuya-ku Tokyo 150-0045 Japan
- ❑ **Year of Establishment:** 1963 **Business Type:** Manufacturing
- ❑ **URL:** <http://www.homerion.co.jp/en/en.html>

Company Overview:

"Contributions to health and beauty" We develop, manufacture and distribute varieties of medical, health and beauty equipments, in the field of "electrostimulation" and "vital reaction". Our clients and partners: University hospitals, National public hospitals, Private hospitals, Nursing care institutions and Distributors all over Japan³ Offices: Tokyo head office, Osaka office, Fukuoka office² Factories: West Tokyo factory, Gunma factory * ISO9001 * ISO13485.

Products/Services Overview:

G-TES General Therapeutic Electrical Stimulator

Pulse care – EMS device

Tens21 - Therapy device

Moisteane IV – Beauty Equipment

Product Video: <https://www.youtube.com/channel/UC2ydXcFE1rTOSPbTJcjw9RA>

❖ Product: **intradermal administration device**

- ❑ **Address:** 2-3-9 Takasago, Soka City, Saitama Prefecture, Japan
 - ❑ **Year of Establishment:** 2002
 - ❑ **URL:** <https://www.lightnix.jp/en/>
- Business Type:** Manufacturing

Company Overview:

Lightnix proposes to improve the efficacy and reduce the cost of drugs through our intradermal drug delivery devices. We are developing single-use disposable intradermal delivery devices (ID devices) that have a high efficacy improvement effect for pharmaceuticals, including vaccines.

Our company was founded in 2002, leveraging our strength in precision molding technology for resins, including biodegradable polylactic acid. We started manufacturing and selling micro blood collection devices made of resin, which mimic the structure of a mosquito's needle that is difficult to realize with metal and causes less pain, from 2012. Currently, we are developing ID devices that can conveniently and stably administer drugs intradermally by applying this molding technology.

Products/Services Overview:

Lightnix Intradermal Administration Device

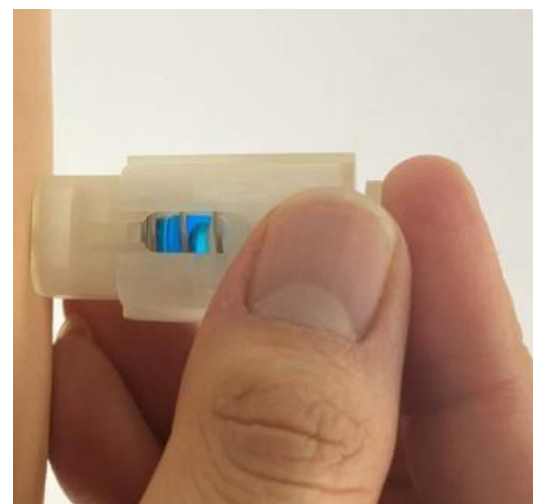

Application to Vaccines

The advantage of intradermal administration is its high ability to acquire immunity. It is known that by locally administering to the intradermal region where antigen-presenting cells are densely located compared to conventional muscle injection or subcutaneous injection, high immunity can be induced even with a small amount of vaccine.

Compared to the usual muscle administration regimen, it is known that equivalent immunity can be acquired with 1/5 dose of many vaccines such as rabies and influenza vaccines in intradermal administration.

However, intradermal administration is difficult, and it is a problem that medical practitioners who can perform procedures are limited for global popularization.

Therefore, our device can be used safely by disposing after single use because it is composed of inexpensive resin and can conveniently administer intradermally just by pressing against the skin.

Matrix Cell Research Institute Inc.

❖ Product: **medical operating equipment and supplies**

- ❑ **Address:** #5 Azuma Bldg, 4th F. 3-38 Kanda Sakuma-cho, Chiyoda, Tokyo, 101-0025, Japan
- ❑ **Year of Establishment:** 2005
- ❑ **URL:** <https://mag-sense.com/>

Business Type: Manufacturing

Company Overview:

We have worked to develop devices that revolutionize conventional cancer operative methods. Our goal is to develop surgeon-friendly devices that are free of facility limitations without radiation exposure. And we hope to increase the success rate of cancer treatment to improve the QOL of patients. Product Categories: Operating equipment and supplies
Potential partners: We are seeking companies who have an interest in our device.

Products/Services Overview:

MagProbe TAKUMI

MagProbe TAKUMI is designed to be used in conjunction with a magnetic nanoparticle fluid or magnetic marker. Unlike conventional radioisotope methods, this probe enables even small- to medium-sized medical institutions to accurately and objectively diagnose cancer metastasis. Where similar devices require a cable-connected external unit, all components of MagProbe TAKUMI - including the permanent magnet and Hall sensor - are fit into a compact, lightweight, handheld device, to be operated by one person alone. Application is kept simple and straight-forward, with only three buttons and an easy-to-understand LED display. CE Marking of Conformity for MagProbe TAKUMI was acquired in July 2019.

Application 1: Sentinel Lymph Node Biopsy (SLNB)

1. Injection of magnetic fluid at areola or in tumor vicinity. Magnetic particles travel through lymph vessels & accumulate in SLN.
2. SLN identification by holding MagProbe TAKUMI to skin surface prior to surgery & determination of optimal incision site. Numeric value on display & sound change when in proximity of SLN containing magnetic nanoparticles.
3. Approaching SLN through incision site to confirm numeric value change via MagProbe TAKUMI's display & sound, and through visual inspection.
4. Excision of SLN and recording of values measured.

Application 2: Magnetic Occult Lesion Localization (MOLL)

1. Identification of lesion site via ultrasound/mammography & insertion of magnetic marker at lesion center.
2. Lightly pull nylon thread to place hook of magnetic marker inside lesion.
3. Detection of magnetic marker position by holding MagProbe TAKUMI to skin surface & determination of optimal incision site. Numeric value on display & sound change to indicate lesion center for excision.
4. Marking of optimal incision site to determine size and shape of incision for maximum tissue preservation & excise lesion.
5. Confirmation that the magnetic marker is in the excised lesion's center via MagProbe TAKUMI and X-ray.

❖ Product: **equipment for diabetic patients**

- ❑ **Address:** 10th Floor Osaka Kogin Bldg. 4-4-1 Koraibashi, Chuo-Ku, OSAKA-City, OSAKA 541-0043
- ❑ **Year of Establishment:** 1920 **Business Type:** Other
- ❑ **URL:** <https://www.nptjapan.com/english/>

Company Overview:

We are a general trading company in Osaka, Japan.

We have exported equipment for diabetic patients to the Gulf countries for many years.

Products/Services Overview:

■ High Concentration Water Car-bonator "B-da"

B-da is a compact device for generating high Concentration Carbonated hot springs with only gas cylinders or tablets.

- ❖ Acquired Certifications Registered as medical equipment in UAE and processing in Kuwait.

❖ Product: **QUATTROMANO - waterbed massager**

- ❑ **Address:** 4th Floor 5-2-3 Kasumigaseki Chiyodaku, Tokyo, Japan
- ❑ **Year of Establishment:** 1949 **Business Type:** Manufacturing
- ❑ **URL:** <https://www.og-wellness.com/>

Company Overview:

Founded in 1949, OG Wellness Technologies Co., Ltd. is a manufacturer of medical, rehabilitation, and elderly care bathing devices, dedicated to the realization of a "society of wellness," where people can remain healthy and productive their whole lives through. OG Wellness manufactures medical and rehabilitation devices enabling solutions the world is waiting for in the fields of welfare and health, as well as medical, long-term care and rehabilitation sectors, providing "Wellness and Beyond" for people everywhere.

Products/Services Overview:

QUATTROMANO - Waterbed massager

Power supply: Single phase 200V-240V, Power input: 5.3kVA,

Dimensions: 820W*2330D*840H, Mass: 220kg (450kg when filled with water),

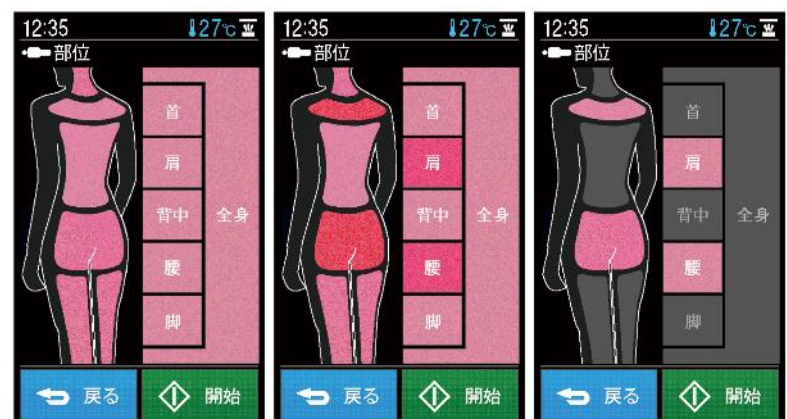

Massage program: More than 200 types depending on setting condition.

Massage pattern: 20 patterns or more, intensity adjustment: 10 levels in total (2 types of nozzle switching in 5 levels)

Preheat temperature: 25° ~ 40°, timer: 1 minute ~ 99 minutes (set every 1 minute)

VS - Our medical sterilizer manufactured in Japan.

FDV - Our medical sterilizer manufactured in Japan.

❖ **Product:** oxygen inhalers and manufacturing various products such as suction machines, nebulizers, veterinary anaesthesia machines, etc.

- ❑ **Address:** 652 Nakakugi Nishi-ku, Saitama-shi, Saitama-ken 331-0077 Japan
 - ❑ **Year of Establishment:** 1950
 - ❑ **URL:** <https://sanko-med.com/en/>
- Business Type:** Manufacturing

Company Overview:

Our company has specialized in medical machinery for over 60 years. Our mission is to meet the needs of medical staff and patients, providing durable and reliable medical devices with speedy and timely delivery. Our products include oxygen inhalers and manufacturing various products such as suction machines, nebulizers, veterinary anesthesia machines, and so on. Among these products, the portable suction device series is the most sold in the Japanese market. We provide two different models: a wall-mounted type and a portable type. The portable type has a wide range of options from low-pressure to high-pressure suction and is compatible with AC and DC types. The DS-1000 wall-mounted suction device that uses disposable bags. It can be used to improve work efficiency for medical professionals, reduce the risk of infection, and is easy to take out even when the suction bag is stuffed.

Products/Services Overview:

Wall-mounted suction unit

- Our DS-1000 is a wall-mounted suction unit for the outlet such as hospitals, and it is designed for disposable suction bag. Skipping the step of washing and disinfecting would be effective for the both operation efficiency and infection risk reduction. The greatest feature of this product especially is the side opening door. This makes a lot easier to replace the suction bag for anyone. Other than that, one-touch open/close button is loaded that easiness is thoroughly pursued. In addition, the designated disposable bag for this product is the same as the one for our disposable portable suction machine.

Minic S-2

Our Minic S-2 is the most standard portable suction machine among all the Sanko suctioning products. Suction machine is used for removing sputum and phlegm, especially for bedridden patients or patients carried out tracheotomy.

We have pursued better reliabilities and safeties from users with ideas of storable suctioning tube to the unit, safety mechanism equipped bottle, and etc. Other than S-2, we also produce high power type suction machine, DC type with mobile battery, and also the one designed to install disposable bags.

Oxygen Regulator Type PSS

Our Pressure reducing valve PSS type is a medical pressure regulator. You may start oxygen inhalation with just cylinder and this PSS at the spot instantly. Oxygen flow rate can be adjusted with the dial by checking the Oxygen flow meter. In addition, various types of connectors are available for all kinds of outlets by countries.

❖ **Product: Develops & manufactures arms for medical equipment & special equipment**

- ❑ **Address:** 3-17-14 Shinmeicho, Okaya City, Nagano Pref., 394-0004 Japan
- ❑ **Year of Establishment:** 2008 **Business Type:** Manufacturing
- ❑ **URL:** <http://www.sywind.com/newfolder3/index.html>

Company Overview:

Our company develops and manufactures arms for medical equipment and special equipment. Our product is an arm equipped with a free stop mechanism (keep stopped position when released a hand). In the medical field, our customers use our arm features (free stop) depending on the application, such as a support arm that holds the hose of a ventilator, a camera arm that holds a camera for filming surgery, and a monitor arm that holds measuring instruments and monitors. It is highly rated by customers as an arm that is easy to operate, convenient, and unbreakable. Currently, it is sold only in Japan, but we hope that overseas customers will be able to use our arms with peace of mind and be satisfied with this opportunity.

Products/Services Overview:

Free Stop Arm - This arm that holds the ventilator hose. The arm can be easily operated with one hand. It stays fixed at the fixed position. One operation and the job is done. Guaranteed 30,000 operations, the arm will not sag and break even after long use. The total length of the arm is 110 cm, and the load capacity is 500 grams. The weight of the arm body is 1.8 kilograms. Optional clamps are available to attach the arm to bedsides, desks, and posts.

❖ Product: Disposable diapers

- ❑ **Address:** 1096-1 Kanasashi, Inasa-cho, Kita-ku, Hamamatsu-shi, Shizuoka 431-2213
- ❑ **Year of Establishment:** 2017 **Business Type:** Manufacturing
- ❑ **URL:** <https://www.dsg-japan.com/index.html>

Company Overview:

About 50 years ago, the DSG Group was founded as a disposable diaper manufacturing company in Hong Kong. We have expanded our business in Thailand, Malaysia, Indonesia, Singapore, etc., and have a strong market share and high recognition in South East Asia.

However, based on the idea of making a clear distinction from the diapers that had been made until then, we created a completely new concept with the aim of disseminating the high technology of Japanese diapers to overseas markets such as Japan and China.

DSG Japan corp. was established in Japan in 2017, designed by experts in diaper manufacturing at domestic laboratories, and integrated management of raw materials, manufacturing, processing, and delivery at domestic production plants. We are a company that manufactures disposable diapers.

Products/Services Overview:

"An unprecedented new type of diaper born from the wishes of everyone who thinks of babies" As a laboratory-born disposable diaper that pursues comfort for babies and ease of use for moms and dads, we have gathered the best of Japanese craftsmanship and techniques and have achieved the thinnest core with maximum number of absorbers in DSG history ever with a soft touch like silk with outstanding technology.

*Product features: "A brand-new diaper that fits perfectly for almost all stages of baby development" Mirafeel is a completely new style of size-adjustable pants-type disposable diapers that has been researched and developed to fit all baby's body types. Even though it is a pants type, you can adjust the size with the tape on the front and it fits perfectly, so you don't have to worry about leaks. It always fits gently on the baby's stomach, and the baby can feel comfortable.

How is it convenient?

- Baby's body shape changes (grows) day by day, so it's possible to get just the right fit every day.
- You can adjust it according to your body type whether you are slim or chubby · Even if the baby falls asleep, the tape can be easily removed like a tape type, and you can change diapers.
- When throwing away diapers, you can wrap them up and roll them up to make them very compact and hygienic. Furthermore, as a feature of this new diaper
- The waist pleats are very soft and breathable, so you don't have to worry about diaper rash.
- With the development of a thin-dry absorbent material that keeps the baby's buttocks dry and comfortable.
- By adopting textile illustrations with a gentle and cute texture with a motif of nature, daily diaper changes will be bright and happy. So, please try the completely new disposable diapers that have never existed before, produced by Japanese engineers at a Japanese factory.

❖ Product: **Medical consumables (360-degree toothbrush, oral cleaning wet wipes)**

- ❑ **Address:** 3-6, Honmachibashi, Chuo-ku, Osaka 540-0029 Japan

LIBATAPE PHARMACEUTICAL Co., Ltd.

❖ Product: **first-aid bandages for general and medical use**

- ❑ **Address:** 45, Iwano, Ueki-machi, Kita-ku, Kumamoto-shi, Kumamoto 861-0136 JAPAN
 - ❑ **Year of Establishment:** 1956
 - ❑ **URL:** <https://www.libatape.jp/english/>
- Business Type:** Manufacturing

Company Overview:

In 1956, we were the first Japanese manufacturer to successfully develop and sell adhesive bandage using a pad with medicinal solution. Since our establishment, we have provided high quality Japanese-made products.

Products range from first-aid bandages for general households sold at drugstores and pharmacies to bandages used in medical settings (hemostatic bandages used to stop bleeding after injections, large bandages, films used to fix indwelling needles) dressings) are manufactured.

More than 90% of our sales are for the domestic market in Japan, but we also export to other countries. In particular, exports to Saudi Arabia and other Middle Eastern countries and Korea and other Asian countries and those sales amount is increasing every year.

We are currently looking for business partners in various regions, so please feel free to contact us. LIBATAPE Brand, Private Brand and Bulk shipments are available.

Products/Services Overview:

SURGIN PORE:

【Comfortable application】

Made of soft non-woven fabric, it has moderate flexibility and provides comfortable application.

【Soft fabric】

The pad surface is covered with polyester mesh to reduce adhesion to the wound area.

【Special note】

Expiration date: 5 years from the date of manufacturing, EOG sterilization

ELASTIC AND WATERPROOF

Main Material: Adhesive tape: Urethane non-woven fabric, polyurethane
Adhesive: Acrylic adhesive

【The advantages of combination materials】

This adhesive tape combines the soft touch of Urethane nonwoven and waterproof of Polyurethane. Therefore, it maintains the soft touch and adheres tightly while protecting the wound from water.

【Special note】

Expiration date: 5 years from the date of manufacturing, EOG sterilization

STANCH PLASTER

【The advantages of combination materials】

This adhesive tape combines the soft touch of Urethane nonwoven and waterproof of Polyurethane. Therefore, it maintains the soft touch and adheres tightly while protecting the wound from water.

【The advantages of double-layered Pad】

The advantages of double-layered pad provides firm and effective compression of hemostasis where needed. The pad that is gentle on the skin provides compression hemostasis with pinpoint accuracy.

【Special note】

Expiration date: 5 years from the date of manufacturing, EOG sterilization
It is recommended to peel it off within 2 hours in order to avoid skin problems.

- ❑ **Address:** 3-35-4, Tamagawa, Chofu-Shi, Tokyo, 182-0025, Japan
- ❑ **Year of Establishment:** 1955 **Business Type:** Manufacturing
- ❑ **URL:** <https://www.carecom.jp/global/>

Company Overview:

CARECOM CO., LTD. is a leading company of the Nursing Support System Industry with 60 years of history and experiences in Japan. Since its founding in 1955, Carecom has supported nursing and nursing care sites as a specialized manufacturer of information and communication systems in the medical and welfare fields. In particular, we hold the top share in Japan for nurse calls.

Products/Services Overview:

Nurse Call & Care Management System: Patients need to be able to call a nurse anytime and get immediate attention.

Nurses need to instantly determine the condition of a patient who calls, and to give prompt, appropriate treatment.

CARECOM developed the BCAC nurse call & care management system to meet both of these needs. Nurses can immediately read the situation from the call sounds, colored indicators and LCD on the master unit. The unique and various icons on the LCD let nurses know the detailed situation at a glance. This is part of how CARECOM is working to make nursing more visual.

Emergency calls are shown by a red icon and flashing indicator.

General calls are shown by a yellow icon and flashing indicator.

Ecoparadise Co., Ltd.

❖ Product: Deoxidation rejuvenation hotbed therapy and cosmetics products

- ❑ **Address:** 15-1-1 Zenfukuji Suginami Tokyo, Japan
- ❑ **Year of Establishment:** 2007 **Business Type:** Manufacturing
- ❑ **URL:** <http://www.ecoparadise.com/campany.html>
- ❑ **FB:** <https://www.facebook.com/EcoparadiseCoLtd>

Company Overview:

We plan, manufacture, sell, and manage products utilizing "Ecoparadise Solution". "Ecoparadise Solution" is a special enzyme that, when used as a catalyst in the manufacturing process of materials and products, changes the properties of materials and products so that they continue to release electrons by reacting with free radicals such as active oxygen present in the environment. It was originally invented by our company by cultivating soil bacteria in Hokkaido, Japan. It inhibits oxidation and [reduces] oxidation of people and things, thus extending their life, reducing breakdowns, and attenuating and eliminating toxicity. They are applied to all kinds of materials and products, including metals, plastics, various building materials, paints, ceramics, soaps and synthetic fibers, and are used in a wide range of fields including agriculture, fishing, industry, medicine, construction and general household products.

Products/Services Overview:

Kojo Densetsu Cream - A saponification type cream made by applying soap emulsification technology without using emulsifiers in raw materials. No synthetic fragrances, preservatives, antioxidants, or colorants are used. It relieves various pains, numbness, and itching such as muscle aches, joint pains, cuts, burns, and insect bites.

Kojo Densetsu Bar Soap - All-purpose body soap, shampoo, and facial cleanser that removes excessive sebum deposits on the skin, while retaining its natural moisture. As shampoo, it keeps the scalp healthy, aids in hair growth, and minimizes hair loss; it is baby-safe.

Tamanoura Cream - A saponification type cream made by applying soap emulsification technology without using emulsifiers in raw materials. No synthetic fragrances, preservatives, antioxidants, or colorants are used. By enhancing regrowth of skin cell, it smooths the skin and removes wrinkles. It is also recommended for scalp care.

Pirkare3 - PirkareIII is made from recycled Rice Bran Oil, together with our unique "Ecoparadise Solution". It effectively cleans by breaking down the bonds that hold dirt and oily particles together. It is used for washing clothes, utensils, and floors, for bath. In the field of agriculture, it is a high-yield "fertilizer" and is able to repel pests. No synthetic surfactants, synthetic fragrances, preservatives, antioxidants, or colorants are used.

Ecoparadise Pail - that converts improves the quality of your drinking and making fermented fruit juice, and also make your choice yogurt in short term. Use it as storage bins to eliminate or reduce odor of organic wastes, or dirty laundry. It can make compost with organic wastes.

Ecoparadise Coat - The synergistic effect of high moisture absorption and desorption ability of "Diatomite" and "Deoxidation" performance of the special sealer containing "ES" that continuously releases electrons in response to surrounding free radicals without side effects improves the durability of in and out environments including building and interior materials, and furnishings (more than 3 times the normal).

Ecoparadise Deoxidation Rejuvenation Hotbed Therapy - It is a hot bath facility that employs "Ecoparadise Construction Method", which maximizes the use of a unique special enzyme "Ecoparadise Solution", and special floor heating technology. We have over 20 years of experience in the "E.D.R." Hotbed Therapy facility. It has contributed to the cure of more than 20,000 cancer patients, including those with terminal cancer. This facility has been used in 100 commercial locations and 150 private homes in Japan, and has been used in P. R. China, Taiwan, the Philippines, Singapore, Malaysia, Vietnam and Indonesia.

❖ Product: skin care products and health supplements

- ❑ **Address:** Moka city, Namikicho, 1-11-4 Tochigi, Japan
- ❑ **Year of Establishment:** 1999 **Business Type:** Others
- ❑ **URL:** <http://lp.ecoro.co.jp/en/lp/>

Company Overview:

We are manufacturers of Skin care products and health supplements.

Since its establishment in 2000, ECORO International Co., Ltd. has made it its mission to plan and develop safe, reliable cosmetics and health products without any harmful chemicals or ingredients. The human body is primarily made up of amino acids, water, and bacteria. Unlike many other companies, our approach is to support these bacteria to perform their beneficial duties more effectively.

We also are working towards solving social issues to create a sustainable society and fulfill the Sustainable Development Goals by providing products that are safe for us, safe the earth, and safe for our future.

Products/Services Overview:

Slim Salacia Plus

Salacia suppresses the absorption of sugar. Salacia has long been used in folk medicine to treat diabetes and obesity. It contains enzymes that break down sugar, and has been shown to inhibit elevated blood sugar levels, anti-obesity, and hepatoprotective effects. Contains Moringa, which improves the immune system, strengthens cardiopulmonary function, and has antioxidant properties, as well as the herb Chanca Piedra, meaning "stone crusher" in Spanish, which is effective in the elimination of uric acid crystals and stones, and is used to treat ureteral stones, arthritis, cystitis, kidney failure, hepatitis, anticonvulsants, the liver, diabetes, kidney stones, and gallstones.

Refiber Gold

Immunity goes up! It prevents viral infections, prevents influenza and colds, menopause, relieves fatigue, rejuvenates, and prevents cancer. It is a supplement that contains ECORO-MH1 manufactured by our own patented method, and also contains 20 kinds of amino acids that are indispensable for health promotion and indigenous bacteria in the intestines (Lacris bacteria, etc.) in a well-balanced manner. Also contains placenta extract. Furthermore, the effect of boosting immunity has increased.

D&D Plus

Contains new functional patented ingredients. Accumulation of heavy metals and waste products in the body makes it easy to gain weight and makes it difficult to lose weight. It is also said to cause infertility, cancer and mental disorders. The new functional patented ingredient "Ecolo Zeolite" contained in D & D Plus adsorbs radioactive substances accumulated in the body and heavy metals such as lead, mercury, cadmium, arsenic, and aluminum, and discharges them to the outside of the body.

Re-aging Plus

This supplement contains 7200mg of the latest ingredient that prevents aging, Nicotinamide mononucleotide (NMN). It is found in vitamin B3, is naturally produced in the body, and exists in humans and all living things. However, NMN is thought to decrease with age, causing various health problems and drive the aging process.

❖ Product: **human supplements and pet supplements**

- ❑ **Address:** 74-3 H-building, Yamashita cho, Yokohama-city , Japan
- ❑ **Year of Establishment:** 1981
- ❑ **URL:** <https://www.joyakuken.co.jp/>
- Business Type:** Manufacturing

Company Overview:

We sell our own products (human supplements and pet supplements), and also planning and development of health foods and do OEM. We support you in bringing out your natural smile, energy, and zest for life. If I can be of any assistance to you, I would appreciate it if you would consider it.

Products/Services Overview:

The Reishi

If you get tired easily, are concerned about blood pressure or blood sugar levels, suffer from allergies, or have a weakened immune system. A product that improves your intestinal environment and improves your problems all at once.

Re-lamoon

We support relaxation and good sleep! It is said that about half of people experience stress in their daily lives. Excessive stress can disrupt the endocrine system and autonomic nervous system, which regulate the body's balance, leading to poor physical condition and lifestyle-related diseases. It contains the well-known neurotransmitter GABA (gamma-aminobutyric acid), Apocynum venetum Leaf extract, which has been popular as a traditional herb for a long time, and vitamin B6, which has a very important function.

❖ Product: **CrossPOD – one-point cane that allows you to stand anywhere by just opening the legs of the cane**

- ❑ **Address:** 3-3-13 Nakashimanishi Oita-shi Oita Japan
- ❑ **Year of Establishment:** 1998 **Business Type:** Manufacturing
- ❑ **URL:** <https://poddesk.myshopify.com/en>

Company Overview:

K_Design, established in 1998, produces and sells "CrossPOD", that has won the Red Dot Design Award, which is famous as one of the world's three major design awards. (Product Description) "CrossPOD" is a one-point cane that can be stood anywhere by opening the legs then it can stand on itself. It is a patented product that has never existed before. The openable-leg unit at the tip of the cane is compact, lightweight and easy operation with 2 actions. The appearance is a simple and sophisticated design.

In 2022, it won the "Red Dot Design Award" (Germany), one of the world's three major design awards, and its value as a product has been evaluated worldwide. (In development) We started developing this product after the interview about the inconvenience of using a cane from a medical care worker. In the development, we repeated trial and errors using our own 3D printer, laser cutter, etc. to complete the prototype. For commercialization, we are designing mass production so that each part can be made with a mould. In development, we are conscious of the best balance between function, appearance, cost, etc. As a product development stance, we are conscious of "not only functionality but also things that are fun to have."

Products/Services Overview:

"CrossPOD" is a one-point cane that allows you to stand anywhere just by opening the legs of the cane. It is a patented product that has never existed before. The openable-leg unit at the tip of the cane is compact, lightweight and easy operation with 2 actions. The appearance is a simple and sophisticated design.

- One self-supporting stick that can be set up anywhere (patent registered: Patent No. 6590177)
- Easy operation of 2 actions (holding the grip, "rotating / unlocking" - "sliding") to open and close the self-supporting legs
- Small and lightweight (total weight: 360g), a general circular rubber can be attached when replacing the rubber tip of the cane.
- Comes in an original box that is ideal for gifts and presents

- Business Type:** Manufacturing

Company Overview:

Our company is a manufacturer of "Foot-Flap" health appliances. We hope to spread this method of exercise all over the world. We would like to introduce you to companies and sole proprietors who can handle this product. We have seen the reality that "people who have poor health in their legs and backs" are suffering from a "life of sitting in a chair and not moving". We have witnessed the reality that people who have deteriorated legs and backs are in even worse physical condition because they sit in a chair and do not move. The benefits of walking as a countermeasure, there is evidence from doctors that "just by walking, the risk of disease is reduced by 90%. By walking, 70% of the muscles in the lower half of the body, which had been resting, start to move. Walking improves blood flow, metabolism, and immunity by raising body temperature. Ashifumi is done at the foot of the chair where you usually sit, and since there is almost no load, you can do it comfortably and naturally, and no special time is needed. It is like walking, but without the time and effort of sitting down.

Products/Services Overview:

ZIGGRU

ZIGGRU allows you to easily perform movements like walking 200 times per minute without load while seated. It is a new exercise method that moves the hip joints and relaxes the muscles for those who have lost muscle tone in their legs or for businesspeople who spend a lot of time sitting.

It is useful for those who feel they should exercise but cannot continue to do so, and for those who know that walking is good for their health but are concerned about it. The material used is Japanese Oguni cedar, which is handcrafted by craftsmen to ensure that it feels good against the skin. This product has been patented in Japan, the U.S., China, and seven other countries.

❖ Product: **Magnesium Alloy- Flamingo Cane**

- ❑ **Address:** 286-1 Yamamoto, FUjinomiya, Shizuoka, 418-0023 Japan
- ❑ **Year of Establishment:** 2010 **Business Type:** Manufacturing
- ❑ **URL:** <http://macrw.com/>

Company Overview:

We are a manufacturing venture company specializing in the processing of magnesium, which is the lightest metal and said to be a metal of the 21st century. By developing our own production technology, we overcome difficulties in processing and are developing products that take advantage of the characteristics of lightest metals. Would you like to make a new history together by making use of magnesium?

Products/Services Overview:

Magnesium Alloy- Flamingo Cane

Shaft: magnesium alloy, Grip: polyurethane, Tip rubber: synthetic rubber, Grip end: polyethylene, Strap: nylon

Description

Three features of the "Flamingo" walking stick.

"Colorful" The good old stick-style design is accented with the image of a flamingo, a tropical bird. The vivid colors add color to your daily life.

"Lightness" The lightest weight metal, magnesium, weighs only about 250g (the equivalent of an apple!). It is lightweight and easy to use, so you can enjoy going out for a walk or a leisurely stroll.

"Safe" Made in Japan from high-strength magnesium alloy by a company specializing in magnesium processing. Made with care at the foot of Mt. Fuji.

❖ Product: **Frozen prepared products for nursing care**

- ❑ **Address:** 42-1572 Kouramen,Saza-Cho,Kitamatuuragun,Nagasaki
 - ❑ **Year of Establishment:** 1954
 - ❑ **URL** <https://nagatomo.co.jp/>
- Business Type:** Manufacturing

Company Overview:

We produce 20 frozen prepared products for nursing care. Each product is prepared in a cauldron using a specific weight of vegetables and seasonings. Our products reproduce the meals served at nursing care facilities and can be served simply by steaming or defrosting them naturally, which helps to reduce labor shortages. The soft texture, small size, and light flavor make it easy for even the elderly to eat, making it suitable for people who have difficulty swallowing or need to limit salt content.
